Class: FYMCA Semester: I	Div: B	Course Code: MCA01504 Course Name: Python Programming Laboratory	Batch: F2
Name: Ajit Mali		Roll No: 51140	
CO No: 2		Assignment No: 4	

PRACTICAL SUBMISSION RECORD- A.Y. 2024-25

Title:

Create an application using python that computes the net amount of a bank account based on transaction log from console input. The transaction log format is shown as follows D(Deposit)=100, W(Withdraw)=700. Withdraw is not allowed if the minimum balance is below 500.

Code:

```
tLog = input("Enter transaction log: ")
tLogList = list(map(lambda x: x.split(" "), tLog.split(", ")))

balance = 0

for tEntry in tLogList:
    tType = tEntry[0]
    tAmount = int(tEntry[1])
    if tType == "D":
        balance += tAmount
    elif tType == "W":
        if balance >= 500:
            balance -= tAmount

print("Current balance in account:", balance)
```

Output:

```
Enter transaction log: D 300, D 300, W 200, W 100, D 100
Current balance in account: 500
```
